PROFESSIONAL PROFILE

Full-Stack Web Developer with hands-on production experience building and maintaining a financial lending management system using Laravel and Vue.js. Independently responsible for end-to-end deployments via SSH on a Linux server, including SSL certificate management — responsibilities typically handled by senior or DevOps engineers. Proven ability to debug complex financial computations, correct historical data integrity issues across ~2,000 borrower accounts, and refactor legacy codebases while keeping live systems stable. Adept at working autonomously with a high attention to detail, communicating directly with end-users to translate business needs into technical solutions, and adapting quickly to new technologies without formal training. Passionate about clean architecture, delivering reliable solutions, and continuous self-improvement.

TECHNICAL SKILLS

Frontend	Vue.js (Vue 2 & 3) • Inertia.js • JavaScript • HTML5 • CSS3 • Tailwind CSS
Backend	Laravel (PHP) • RESTful APIs • PHP Artisan • Composer
Database	MySQL • Database schema design • Query optimization • phpMyAdmin
Server & DevOps	Linux Server CLI • SSH / PuTTY • SSL/TLS Certificate Management • Manual deployment experience
Tools	Git • Bitbucket • SendGrid • Responsive Design • Laravel Carbon • cPanel

WORK EXPERIENCE

PrimeOutsourcing

October 2025 – Present

Full-Stack Web Developer

- Solely responsible for maintaining and enhancing a production Laravel + Vue.js financial lending management system serving real accounting and marketing end-users.
- Exercised full ownership over **Linux server administration** for production deployments; utilized PuTTY/CLI to manage directory security, optimize file permissions, renew SSL certificates, and ensure server uptime during releases.
- Debugged and corrected complex financial computations including amortization schedules, penalty carry-overs, restructured loan calculations, and Outstanding Balance discrepancies across ~2,000 borrower accounts.
- Refactored legacy Blade-based codebase into reusable Vue.js components, applying clean architecture patterns and modern best practices within an existing codebase.
- Managed full Git workflow independently: feature branching, merging to development, creating release branches, and deploying to staging before pushing to live.
- Investigated and resolved production incidents including SendGrid/OTP email delivery failures, coordinating directly with external support and implementing temporary workarounds to minimize user impact.
- Corrected historical data integrity issues caused by incorrect computations in legacy code dating to 2019, ensuring financial accuracy across the entire borrower dataset.
- Implemented Investment Savings CRUD module from scratch: designed database schema, built Laravel API endpoints, and created Vue.js modal components with auto-calculation and validation.
- Resolved a critical Git merge conflict involving 10+ diverged branches by rebasing and correcting the commit history, then co-proposed migrating to a release branch strategy for safer production deployments.

CuroTeknika

2020 – 2021

Customer Service Representative

- Handled local accounts for Meralco and DepEd, managing customer concerns and service requests.

INTERNSHIPS

OnePHP Technology

2024

Backend Developer Intern • 300 Hours

- Designed and managed MySQL databases to support web application functionality.

Equalynx Network Co.

2024

Network Technician Intern • 300 Hours

- Installed and configured access points and routers in client stores.
- Conducted basic network troubleshooting to maintain stable connectivity.

PROJECTS

RBAC System (Freelance)

Laravel • Vue.js • Inertia.js (Latest Versions) • MySQL

- Built a full-stack Role-Based Access Control system from greenfield using the latest versions of Laravel, Vue.js, and Inertia.js — demonstrating ability to architect and develop new projects independently.
- Implemented role management, user authentication, and protected route handling.

GitHub Link: <https://github.com/capstonedummy11/capstone-rfid>

RBAC Client Portal and Project Tracker (Developed during training)

Laravel • Vue.js • MySQL • Axios

- Built a full-stack Client Portal and Project Tracker with Role-Based Access Control from scratch, submitted as a training requirement and approved by a senior developer upon code review.
- Implemented user authentication, role and permission management, and protected route handling to control access across different user types.

EDUCATION

Rizal Technological University

BS Information Technology

2021 – 2025

STI College Cubao

IT in Mobile App & Web Development (SHS)

2018 – 2020

Manggahan High School

High School

2014 – 2018

KEY STRENGTHS

- Production server ownership at junior level
- Financial domain knowledge (lending systems)
- Legacy code debugging & refactoring
- Full deployment cycle ownership (code → live)
- Direct end-user communication & incident management
